RESTRICTIONS

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 24-31, drawn to a method for pausing a ribosome during translation, classified in class 435, subclass 91.1.
 - II. Claims 32-46, drawn to a protein-encoding RNA covalently bonded to the protein coding sequence, classified in class 536, subclass 23.1.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process i.e. the protein-encoding RNA can be made using chemical synthesis of the RNA and the protein followed by covalent coupling.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the
